F-1 STEM OPT · Authorized to work 3 years · No immediate sponsorship required

Cloud & Platform Engineer with hands-on production experience in Terraform IaC, Kubernetes, CI/CD, and Linux administration across multi-environment AWS deployments. Built observability stacks, automated alerting pipelines, and hardened production servers to zero security incidents covering the full infrastructure lifecycle from provisioning to incident response. Actively expanding into GCP and Azure. Seeking opportunities where I can contribute to scalable, secure, and automated infrastructure delivery

TECHNICAL SKILLS

- **Cloud & Infrastructure:** AWS, Azure, GCP
- **Systems & Infrastructure:** Linux Administration, Server Provisioning, DNS, SMTP/IMAP, Reverse Proxy (Nginx), SSL/TLS, Load Balancing, Firewall Configuration, System Hardening
- **Programming & Scripting:** Bash, Python, Rust, Java, C++, SQL, JavaScript
- **Automation & DevOps:** Terraform, Ansible, Infrastructure as Code, GitHub Actions, CI/CD, Docker, Kubernetes
- **Monitoring & Observability:** Log analysis, health check automation, system metrics (CPU/disk/memory/auth events), alerting pipelines

WORK EXPERIENCE

SYSTEM ENGINEER

Intrastack Solutions

Remote / Orlando, Florida

June 2025 – present

- Architected AWS infrastructure across 3 isolated environments (Dev/Test/Prod) using Terraform IaC — VPCs, subnets, EC2, EKS — cutting provisioning time ~60% and eliminating configuration drift.
- Hardened Linux servers with least-privilege IAM, SSH key-only auth, UFW, and Fail2Ban; maintained zero security incidents across all monitored systems.
- Built DNS, monitoring, and log analysis stack with automated health checks (CPU, memory, disk, auth events), reducing mean time to detect anomalies by ~45%.
- Engineered Dockerized Mailcow (Postfix, Dovecot, SPF/DKIM/DMARC/TLS), eliminating vendor lock-in; migrated 30+ mailboxes with zero downtime and cut mail costs ~70% (~\$200/month saved).
- Authored Bash scripts for health reporting and alerting, enabling proactive detection across all production Linux hosts.

STUDENT MANAGER

University Dining

Menomonie, Wisconsin

Sep 2023 – May 2026

- Led 10+ person team across 300+ transactions/shift; resolved 15+ escalations weekly — building incident communication and cross-functional coordination skills directly applicable to SRE on-call.
- Maintained zero-stockout inventory for 100+ critical supply items using systematic tracking during peak demand periods.

PROJECT

AWS MULTI-ENVIRONMENT INFRASTRUCTURE AS CODE PLATFORM

- Deployed reproducible Dev/Test/Prod AWS environments via Terraform modules; implemented S3 remote state locking and GitHub Actions CI/CD to validate every pull request.
- Externalized sensitive Terraform backend config from source control via dynamic init workflows, enabling secure public repo collaboration.

WINDOWS SERVER ACTIVE DIRECTORY & VPN INFRASTRUCTURE LAB

- Built a 5-VM Windows Server 2022 enterprise lab with single-forest AD domain, 2 Domain Controllers (inc. Server Core), DNS/DHCP failover supporting 200+ IP leases.
- Implemented RBAC across 6 OUs, 20+ user accounts, 5 security groups, Group Policies, and a VPN gateway; validated end-to-end with a domain-joined Windows 11 client.

EDUCATION

University of Wisconsin - Stout

Menomonie, WI

Graduated May, 2026

- Bachelor of Science in Computer Science (GPA: 3.9)
- Cybersecurity and Secured Software Development Concentration
- Mathematics Minor | Computer Networking System and Design Minor | Information Security Management Minor
